Learning to cite and write docs within Rmarkdown

Anoob Prakash

6 March 2019

The begining of the document.. insert citation here (Villemereuil et al. 2016; Bontrager and Angert 2018)... and link author name here Villemereuil et al. (2016)... you can get the citation key from mendley or the bib file itself.

Notes on output chunk

csl: citation style - find it online or from the journal file and then inser the same in the top chunk..

keep_tex: yes - helps keep the tex file which can be used to work in LaTeX or overleaf. A word of **caution**, always keep it just below the **output:** line in order to avoid any unnecessary complications.

Useful packages to keep an eye out for:

- `natbib` for citation managing in LaTeX.

- `kable` - package for pulling out table for R
